

The Royal Institution of Naval Architects

International Conference LNG Ships & Floating Systems

Re-Scheduled on the 21 - 22 November, London, UK

Call for papers

LNG accounts for a significant part of the growth in the global energy supply and despite the recent economic situation the future demand for LNG carriers, floating storage and processing systems is expected to increase.

While some companies are building larger vessels to take advantage of economies of scale others are looking at developing small vessels for shortsea and coastal trades to help create LNG distribution networks.

New alternatives to LNG including compressed/pressurised natural gas (CNG/PNG), where the gas is stored under pressure at ambient or semi-refrigeration temperatures, are also being developed. There is also a growing interest in floating production, storage and offloading systems for offshore field development and re-gasification systems and plants designed to avoid the need to construct land based processing and distribution centres.

RINA invites papers from naval architects, builders, class societies, operators and researchers on all related topics, including:

- Design of larger capacity LNG carriers,
- Design of shortsea and coastal LNG carriers,
- Design for greater flexibility to cater for spot market trading,
- Novel LNG trading routes: Arctic and beyond
- Floating storage, re-gasification and processing,
- Alternatives to LNG - CNG, PNG, etc.,
- Optimisation of power plants
- Issues associated with partial filled LNG tanks
- LNG ship to ship transfer systems

- ☐ I would like to offer a paper & attach a synopsis of not more than 250 words by 01 July 2012
- ☐ I wish to receive details on exhibition space and sponsorship opportunities
- ☐ I would like to receive a full programme brochure and registration form
