Robert McMahon
Marine Engineer

Simon Robards
Manager East Operations, Australian Maritime Safety Authority

Michael Kelly
Pilot, Port Authority of NSW

Bernie Farrelly
Project Manager, Tas Bull Seafarers Foundation

Date

Wednesday 7 October 2020

Time

6:30 pm

Meeting

This presentation will be held as a video-conference webinar hosted by IMarEST in London using the Zoom platform.
Registration for the presentation will be required.

This presentation is all about understanding and solving some of the technical, management and operating problems arising on cruise ships and other vessels due to the COVID-19 outbreak. How can microscopic COVID-19 pathogens transmit from person to person, bring the international cruise industry to a standstill and immobilise some of the world's largest warships?

In this presentation we look at that question from the perspective of maritime professionals responsible for the safe, efficient and seaworthy operation of ships under their management oversight.
