Please note this webinar is only open to first 100 participants who had registered and joined the webinar session on first-come-first-serve basis. For benefit of those who had pre-registered, please do not share the access link further after registration. In case you are unable to attend, kindly cancel your registration prior the event to allow other members and guests to join this webinar.

Abstract

The shipping industry is at the beginning of a fundamental transformation. The combination of the rise of connectivity and digitalization, and the need to move away from traditional fossil fuels, means that every aspect of the industry's operating model will change over the next three decades. The growth of data science and Artificial Intelligence had also provided the kindling for bigger disruption due to come. Keng Hoe will share about the latest in connectivity at sea, how technology is driving digitalization. He will also discuss the innovation landscape and how this latest development is seeding the disruption in the maritime industry and how it can drive the next generation of maritime trade.

About the Speaker

Keng Hoe is the lead in APAC for growing the Inmarsat IoT Platform known as Fleet Data. Besides engaging the merchant marine sector on digitalisation, he works closely with our Certified Application Providers in improving innovation across the sector. Keng Hoe is an experienced seafarer, familiar with the connectivity challenges, and a leader in innovation and design thinking. He dedicates time at the Singapore Computer Society, leading the Artificial Intelligence & Robotics chapter.

Prior to joining Inmarsat, he was the General Manager of a Singapore based Artificial Intelligence & Robotics startup and Product Line Manager with Thales where he led the team in developing the next generation maritime security software. He began his career with the Republic of Singapore Navy where he spent 18 years, with some of his key achievements include participating in the 2004 tsunami relief operation, two tours in the Arabian Gulf and numerous operations in Singapore and the region. Keng Hoe received his Masters from the S Rajaratnam School of International Studies, Nanyang Technological University in 2008 and graduated from Imperial College London in Information Systems Engineering.

Instructions to join the webinar using Zoom

1. Download Zoom software before joining the webinar session at
    https://zoom.us/download
2. You may join the webinar by clicking onto the link provided in the email after
    registration.
3. Alternatively, you may join the webinar by clicking https://zoom.us/join and key
    in the Meeting ID and Password provided in the email after registration.
4. Video and audio function will be disabled during the session for all participants
    (except host and presenter).
5. For attendance recording purposes, please provide your name, company and
    associated membership (e.g. SNAMES, Joint Branch, SSA or non-member) in
    the chat window upon joining the webinar session.
6. All participants are recommended to join at least 10 minutes before the start
    of seminar to allow some time to register your attendance.
7. During the Q&A session, please key in your questions into the chat window and
    it will be selected by the host and refered to the presenter.
8. Please provide your feedback by accessing the link provided after the Q&A
    session.
