ENERGY &
POWER

NEW FOR 2010

• NEW MEET THE ENERGY COMPANIES SPEED NETWORKING!

A fun way to meet lots of energy company representatives quickly! They will remain stationary whilst you will have a minute to explain your interests and swap business cards before moving on to the next energy company delegate.

• NEW THE QUICK FIRE SHOWCASE FOR NEW TECHNOLOGIES AND NEW SOLUTIONS FOR THE FLNG MARKET

A great opportunity to see 8 new cutting edge solutions for the FLNG market described in just one hour! Each speaker will be allowed to speak for 8 minutes (with a limit of 5 slides!) before we move on to the next demonstration. You will then be able to follow up with any of the speakers who have aroused your interest at the speed networking immediately after the session. And the audience gets to vote and choose which 3 providers get a FLNG 2010 award of excellence!

• NEW BREAKFAST BRIEFING

The Latest Developments in Floating Storage Regasification Units: What Lessons Can We Take From FSRUs To Apply To The Successful Development Of FLNG Facilities? Our popular breakfast briefings give you access to the latest research and allow you to build on your knowledge and network in a relaxed environment.

• NEW NETWORKING ROUNDTABLES

These roundtables will provide you with the ideal place to meet face to face with some of the key speakers. These key speakers will lead discussions on highly topical subjects and groups will be kept small (about 12) so that you can discuss issues on your agenda in a highly personal and interactive environment.

• NEW NEW LIQUEFACTION TECHNOLOGIES SUMMIT

Offshore natural gas liquefaction has different process requirements from traditional on-land, base-load liquefaction plants. Our brand new summit day will allow delegates to really explore the different technology options.
